readers interested in learning environmental economics.~ ~

Tom Tietenberg is the author or editor of eleven books (including *Environmental and Natural Resource Economics*, Eighth Edition, and *Environmental Economics and Policy*, Fifth Edition), as well as over one hundred articles and essays on environmental and natural resource economics. After receiving his PhD in economics from the University of Wisconsin at Madison in 1971, Tietenberg was elected President of the Association of Environmental and Natural Resource Economists (AERE) in 1987. He has consulted on environmental policy with the World Bank, the InterAmerican Development Bank, the Agency for International Development, and the Environmental Protection Agency, as well as several state and foreign governments. In 1992, Tietenberg spoke at the first Earth Summit in Rio de Janeiro, Brazil, and has lectured on sustainable development at many other conferences around the world. In 2006 he was designated one of six inaugural AERE Fellows. He is currently the Mitchell Family Economics Professor at Colby College, where his research focuses on the design and evaluation of economic incentive mechanisms for environmental protection and tradable permit systems for pollution control and fisheries management. ~ ~ ~ ~ ~ Lynne Lewis is chair of the economics department at Bates College where she teaches microeconomics, environmental economics, natural resource economics, and valuation. Lewis received her Ph.D. in economics from the University of Colorado in 1994 after finishing a two-year dissertation fellowship at the Environmental and Societal Impacts Group at the National Center for Atmospheric Research. Her dissertation received the Universities Council on Water Resources (UCOWR) Dissertation Award in 1995. Currently, she is working on a research grant focused on valuing the potential benefits from dam removals and river restoration. She has also worked extensively on the economics of transboundary water resources, tradable permits for pollution control and the valuation of environmental amenities and disamenities within watersheds and coastal zones. She currently serves on the Board of the Natural Resources Council of Maine, the Penobscot River Science Steering Committee, and the Advisory Board of Mitchell Center for Environment and Watershed Research. She received the Friend of UCOWR award in 2005.

I'm not an economist, but this is one of favorite books when it comes to the study of business sustainability and how economics interacts with it. I highly recommend owning this book for your personal library...it's an important and quick reference book that leads one into other areas for further investigation and research. It's a must have!

While the book has some facts it does not really comply with classes offered if you attend ashford

This book is by no means easy to read, the graphs are helpful but it takes time to understand some of these concepts shown throughout the book.

this was a book for one of my classes and it shipped fast so that I had it before my class started. A little used, but that was fine for the price.

The pages are ripped out of the book.. They're constantly falling out, and I hope I don't get charged for it.

I would recommend to any student these are priced right and in very good shape. I ordered them for a class and had them in plenty of time.
