Adjustment Computations: Spatial Data Analysis

Synopsis

the complete guide to adjusting for measurement error—expanded and updated no measurement is ever exact. Adjustment Computations updates a classic, definitive text on surveying with the latest methodologies and tools for analyzing and adjusting errors with a focus on least squares adjustments, the most rigorous methodology available and the one on which accuracy standards for surveys are based. This extensively updated Fifth Edition shares new information on advances in modern software and GNSS-acquired data. Expanded sections offer a greater amount of computable problems and their worked solutions, while new screenshots guide readers through the exercises. Continuing its legacy as a reliable primer, Adjustment Computations covers the basic terms and fundamentals of errors and methods of analyzing them and progresses to specific adjustment computations and spatial information analysis. Current and comprehensive, the book features: Easy-to-understand language and an emphasis on real-world applications Analyzing data in three dimensions, confidence intervals, statistical testing, and more An updated support web page containing a 150-page solutions manual, software (STATS, ADJUST, and MATRIX for Windows computers), MathCAD worksheets, and more at <http://www.wiley.com/college/ghilani> The latest information on advanced topics such as the tau criterion used in post-adjustment statistical blunder detection Adjustment Computations, Fifth Edition is an invaluable reference and self-study resource for working surveyors, photogrammetrists, and professionals who use GNSS and GIS for data collection and analysis, including oceanographers, urban planners, foresters, geographers, and transportation planners. It's also an indispensable resource for students preparing for licensing exams and the ideal textbook for courses in surveying, civil engineering, forestry, cartography, and geology.

Book Information

Hardcover: 672 pages

Publisher: Wiley; 5 edition (March 22, 2010)

Language: English

ISBN-10: 0470464917

ISBN-13: 978-0470464915

Product Dimensions: 6.4 x 1.8 x 9.4 inches

Shipping Weight: 2.3 pounds (View shipping rates and policies)

Average Customer Review: 3.9 out of 5 stars 8 customer reviews

The complete guide to adjusting for measurement error—expanded and updated No measurement is ever exact. Adjustment Computations updates a classic, definitive text on surveying with the latest methodologies and tools for analyzing and adjusting errors with a focus on least squares adjustments, the most rigorous methodology available and the one on which accuracy standards for surveys are based.

CHARLES D. GHILANI, PhD, is Professor of Engineering in the Surveying Engineering program at The Pennsylvania State University.

I don't understand how this book is getting such high ratings. The explanation and illustration of formulas is done in the absolute worst way. Over all this text is a complete mess.

This book is one of the major reference for training in adjustment computation when i was an undergraduate student at university of Lagos, Nigeria. It is also the one of the msjor reference material for teaching my students as a lectursl

Decent book, a lot of details regarding spatial data analysis. Covers all the relevant information from statistics to adjustment procedures and results.

Actually, I do not read the new version yet. However, the previous one is a new book for everyone who would like to study about Least Squares Adjustemnt. Hopefully, I can get the new edition soon. I will be right back after obtaining a new one.Wait Wait Wait....Chai

Good examples, Good programs. Just what the doctor ordered.

The explanations in the book are very detail, examples are also available for reference.is definitely a good choice for those who want to study surveying

I find this book to be very useful for my class as a textbook. I believe I am learning more from the

book than I am from the professor.

I have tried some Pascal procedures in this book and found some errors with them. Please look into Table 26.3, 26.5 & 26.7. No error is found with Table 26.4. Hope the authors can debug all procedures and e-mail me the bug-free procedure.
